

BUTTERFLY FEVER

Did you know that many animals migrate? They migrate to find food, water, or a more comfortable climate. One migratory animal is the monarch butterfly. But before they migrate, they must grow from an egg, to a caterpillar, to a chrysalis into the beautiful orange and black monarch butterflies we find fluttering around North America, Central and South America, and Australia.

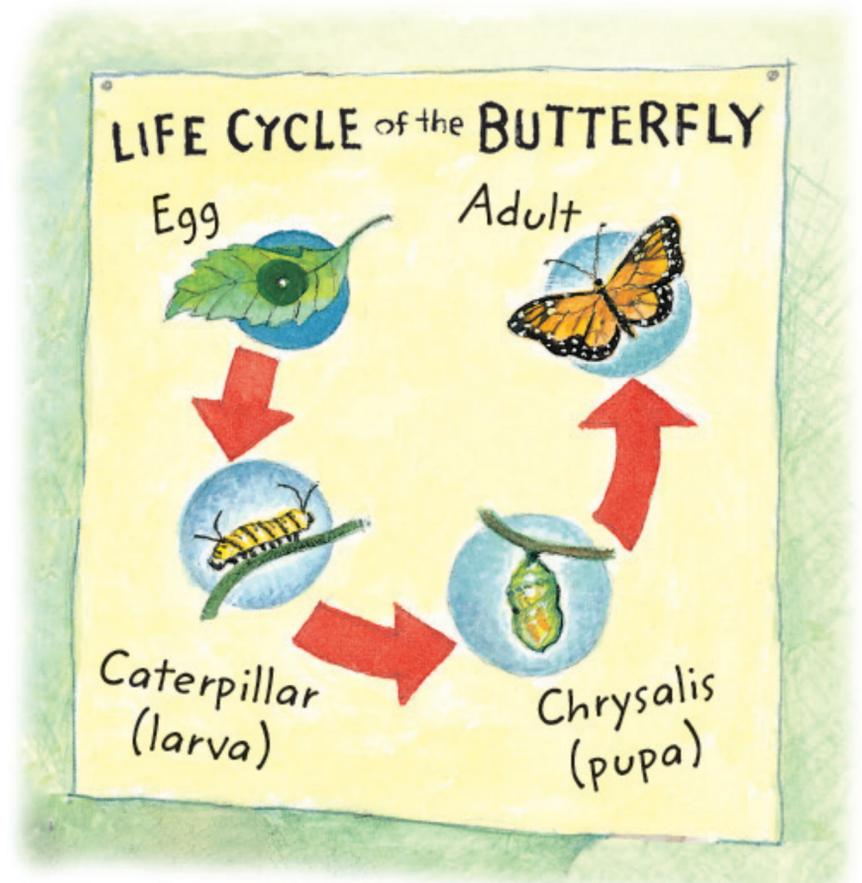

Life Cycle of a Butterfly

Supplies: A deck of Butterfly Life Cycle Cards
For 2–4 players

How to Play:

The goal of the game is to make sets of the 4 stages of the butterfly life cycle.

1. Shuffle the cards.
2. Deal each player 7 cards.
3. Place the rest of the cards in a pile facedown between the players. Turn one card from the pile face-up in front of everyone. This card is the start of the discard pile.
4. Taking turns, each player either selects a card from the facedown pile or the top card from the discard pile to add to their hand. If a player has a set of all 4 Life Cycle cards, they place that set, in order, in front of them. Then the player picks one card from their hand to add to the discard pile.
5. After a player has discarded a card, it's the next player's turn.
6. When all of the cards have been taken from the facedown pile, shuffle the discard pile and place it facedown.
7. The game ends when all the cards have been pulled or when the discard pile has been shuffled twice, whichever comes first.
8. The player with the most sets of Butterfly Life Cycle cards (egg, caterpillar, chrysalis, and adult) wins.
